

# Drywall Tools

## Johnny Bungay & Colin Kennedy

### Wall Board Lifter

Worn on the foot and used to lift and hold a drywall sheet for nailing.

### ####Hand Sander

Used to smooth plaster that was applied to a join.

### ####Drywall Saw

Used to cut drywall. Has a pointed tip so that it can be used to pierce drywall.

### ####Stud Finder

Used to locate the wooden studs behind drywall. Useful when attaching something heavy to the wall.

### ####Drywall Square

A large square used to mark and cut drywall sheets.

### ####Drywall Corner Tool

An angled trowel for smoothing plaster at a corner join.

### ####Plaster Hawk

Used to hold plaster in one hand so that the other can apply it with a trowel. Similar to an artist's palette.

### ####Pole Sander

A sand-paper vehicle which can connect to a broom handle. Enables sanding of ceilings or high walls.

### ####Drywall Hammer

A lightweight hammer with a hatchet tail suitable for quickly breaking one-by-pieces of wood that are frequently needed to provide backing for patch jobs. The tail is also used to support and carry a sheet of drywall.

### ####Outside Corner Tool

Used to smooth plaster on an outside corner.

### ####Utility Knife

A general purpose knife. Used in plastering to score to score and crack drywall.

### ####Taping Knives

A wide blade used to spread and plaster.

### ####Putty Knife

A smaller blade used to spread and smooth plaster.

### ####Finishing Knife

Used to apply and feather drywall compound.

### ####Plastering Trowels

Used to spread plaster.
